CONNECTION TO TEMPORARY WATER

TENDER NO.	20-T20
WORK TO BE COMPLETED	Connection to Temporary Water

Please be advised that your water supply is expected to be shut off on **June 3rd, 2020 at 8:00 am**, to complete a switchover from the municipal water system to the temporary water supply. Throughout the duration of construction, properties will be supplied with potable water using an overland temporary water system. This system will be connected to your residence using a piping system connected to the outdoor tap.

The Contractor will be going door to door once the municipal water supply has been turned off, in order to connect each property to the temporary water system. If you will not be home at the time specified above, please follow the instructions below:

- Shut off the interior water supply valve to your property (typically located in the basement towards front of a residence).
- Open the outdoor tap by turning the tap counterclockwise.
- Open small valve situated on the “Y” adapter attached to the tap and it point towards your outside tap (refer to second photo).
- Open the cold water tap on a bathtub (or kitchen faucet) and allow the water to run for 5 - 10 minutes.

The installation of the temporary water supply may result in minor water service issues, such as reduced pressure and increased water temperature. If your water is warm, run taps until the water is cold. If the issue doesn't improve or you are experiencing any other issues, contact the City or Contractor via the contact information provided below and a representative will provide you with assistance.
