

# CONNECTION TO THE TEMPORARY WATER SUPPLY

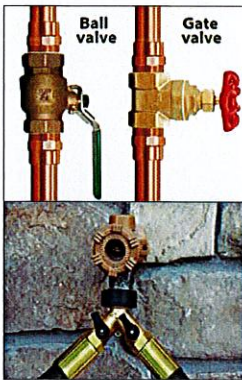

Project: 21-T17 – Third St East

Please be advised that the water distribution system will be shut-off for a short period of time to complete a switchover from the municipal water system to the temporary water supply. The disruption is expected to occur on:

**Monday, May, 16th 2022 at 10am**

Throughout the duration of the project, a temporary water system will supply all properties with water. This system will connect to your house using a piping system connected to the outdoor tap.

The Contractor will be going door to door once the municipal water supply is turned off. They will be connecting each property to the temporary water system. If you aren't home while the conversion is taking place, please follow the instructions below:

- Shut off the interior water supply valve to your property. This is usually located in the basement towards the front of a house.
- Open the outdoor tap by turning the tap counterclockwise.
- Open the small valve situated on the “Y” adapter attached to the tap and point it towards your outside tap (refer to second photo).
- Open the cold water tap on a bathtub (or kitchen faucet) and allow the water to run for 5 - 10 minutes.

The installation of the temporary water supply may result in minor water service issues. This may cause reduced pressure and increased water temperature. If your water is warm, run your taps until the water is cold.

We apologize for the inconvenience. If you have any questions or require further information, please reach out to the project team using the contact information provided below.
